

New password reset feature in Citrix

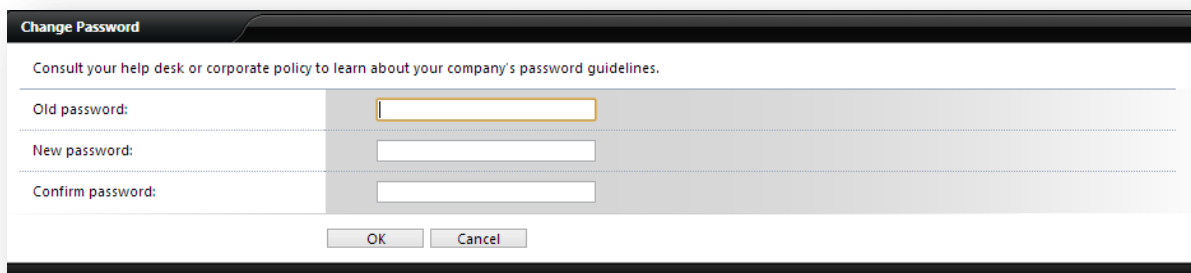

IT Services have now setup the Password Reset Feature in Citrix and would like to take this opportunity to point out additional functionality it offers.

In addition to the prompts to change your password when it is required, and warning that your password is nearing expiration, it gives you the ability to change your password at any time from the Citrix Application/Desktop screen.

Below indicates where you can find this option.

When you click on this option you will be prompted as you are with the other password reset options to change your password. Just enter your existing password and your desired new password twice and click ok.

Change Password

Consult your help desk or corporate policy to learn about your company's password guidelines.
